Anne M. Perusek and Peggy Layne, “ICWES XII: ‘Women in a Knowledge-Based Society” [SWE Magazine, vol. 48(5), 2002, p. 88-94, p. 88-90.]

[...]

Dr. Sue Rosser, Dean of the Ivan Allen College at Georgia Tech and author of many books on women in science, gave a plenary lecture on feminist theories of women, science, and technology. Her remarks discussed the various perspectives of feminist thought, from liberal feminism through socialist, essentialist, psychoanalytic, and post-modern feminism. Each of these schools of thought approaches the relationship between gender and science from a different set of assumptions about the position of women in [the] world, and whether or not you agree with any or all of them, they can provoke thoughtful discussions of how the professions of science and engineering operate and why women continue to be underrepresented in these fields.
